**IPLOCKS LAUNCHES TO DELIVER SCALEABLE, NON-INTRUSIVE  
ENTERPRISE-CLASS DATABASE VULNERABILITY ASSESSMENT AND  
CONTINUOUS MONITORING SYSTEMS**

**SAN JOSE, Calif. – November 3, 2003** – IPLOCKS™, an innovative provider of database vulnerability assessment and continuous risk monitoring systems, today announced the launch of the company. IPLOCKS significantly reduces the window of vulnerability for database attacks and errors by automating the process of assessing and monitoring transaction-level data integrity and by detecting and reporting database changes and suspicious activities.

According to the 2003 CSI/FBI Computer Crime and Security Survey, threats to information assets come from both inside and outside an organization. While most security companies focus on external threats, 80 percent of network intrusions result from insider abuse of network access. The IPLOCKS technology detects, analyzes and monitors database security policy violations, suspicious or malicious data, data and structural integrity, as well as change control and information theft to ensure secure and uninterrupted business operations.

“According to industry analysts, the majority of high-value breaches (those costing \$250,000 or more) are perpetrated from the inside because insiders often know how to

access the most valuable data,” said Akio Sakamoto, President and CEO at IPLocks. “IPLocks offers a complete database information risk management package with highly accurate non-intrusive detection, flexible deployment and support for industry regulation compliance to warn managers of security breaches, such as unauthorized access, malicious changes and information theft.”

IPLocks is the first vendor to provide real-time database security software that proactively protects against database threats in a scalable, cost effective and efficient manner. IPLocks offers a non-intrusive, cross-platform database vulnerability assessment and monitoring system for internal, data level information protection that mitigates business security risks. IPLocks improves bottom line economic value and facilitates compliance for several new industry regulations including Sarbanes-Oxley, Basel II, Gramm Leach Bliley and the U.S.A. Patriot Act.

#### **About IPLocks**

IPLocks, Inc. is an emerging provider of database vulnerability assessment and continuous risk monitoring systems used by global security, risk management and IT personnel to protect the integrity, security and availability of mission critical data. IPLocks automates the notification of system level database changes for security and business policy violations, suspicious, malicious or corrupt data, structural integrity and information theft that other security policies fail to prevent. IPLocks enables government agencies, audit services, financial institutions and service providers to mitigate information risks where database security and monitoring is essential to ensure uninterrupted business operations. Additional information about IPLocks is available at [www.iplocks.com](http://www.iplocks.com)
