IPLocks CUSTOMER NAMED BEST IN CLASS BY ABERDEEN GROUP

Best Practices in Security Study Highlights Customer's Use of IPLocks Information Risk Management Platform

SAN JOSE, Calif. – July 13, 2005 – IPLocks™, the leading provider of enterprise information risk management solutions, today announced that it has been named as a solution provider to one of the winning customers in *Best-In-Class Information and Access Security Solution* research conducted by the Aberdeen Group. A financial services customer using the IPLocks Information Risk Management Platform was selected for its excellence in information and access security. IPLocks and its customer are included in Aberdeen's report on Best Security Practices released this week.

Aberdeen used performance metrics to analyze hundreds of enterprises before choosing the top 10 enterprises and their respective solution provider for in-depth case studies in the best practices report. IPLocks is the only information and database security company making the cut and profiled in the study.

“The organizations highlighted in this report are at the top of the industry in information security. They act differently, including their approach to security, the technologies they

choose to employ, their organizational structure and how data and knowledge is managed,” said Jim Hurley, analyst at Aberdeen. “The companies identified in this research have partnered with leading technology vendors, such as IPLocks and others, to provide these best-in-class solutions.”

Designed specifically for high volume transactions, IPLocks provides a non-invasive, heterogeneous database monitoring, assessment, audit analysis and reporting platform that addresses all key database security layers and provides unprecedented levels of information security protection to ensure data security, confidentiality, integrity and availability for regulatory compliance.

“We are honored to be highlighted in this study and chosen as a best-in-class security solution by Aberdeen Group,” said Akio Sakamoto, President, CEO and Co-founder of IPLocks. “In light of the growing number of information breaches, it is only through information risk management that organizations can protect their brand, customer and employee privacy, and secure their critical information assets. This proactive stance against these emerging threats is what sets our customers apart in terms of information and access security.”

About IPLocks

IPLocks off-the-shelf software protects business continuity; safeguards company brand reputation and eases the pain of corporate governance by securing critical information assets from negligent and malicious acts. The IPLocks Information Risk Management Platform alerts management to information risks from security and business policy violations, attacks on data, compromised structural integrity and information theft, which other security solutions fail to detect. IPLocks secures business critical data for financial services, telecommunications, media services, healthcare, public utilities and other industries. Founded in 2002, San Jose, California-based IPLocks is a privately held global corporation with customers throughout North America, Asia Pacific, South America and Europe.
