IPLOCKS TO PRESENT AT ORACLE USER GROUP

SAN JOSE, Calif., Sept. 12, 2006 — IPLOCKS™, a leading provider of database security and compliance solutions that protect business critical information, today announced that Adrian Lane is speaking at the Orange County Oracle User Group taking place on Wednesday, September 13. Mr. Lane will discuss how companies can sustain compliance with industry regulations such as Sarbanes Oxley and the Gramm-Leach-Bliley Act. The event will be held at the Irvine Hilton, with Mr. Lane's presentation at 10:45 am.

“Meeting Sarbanes-Oxley compliance is a crucial business objective for organizations today, but just one of the many regulatory issues companies face, so approaching compliance strategically is a key issue” said Adrian Lane, CTO at IPLOCKS. “To truly meet regulatory requirements, a sustained compliance model with continuous oversight of the flow and processing of data is required. Speaking at the user group event provides IPLOCKS with the opportunity to share the knowledge we've gained helping organizations implement processes that allow them to sustain compliance.”

Government regulations and requirements are continually evolving, yet the core need to protect “high risk assets” against vulnerabilities and other threats remains constant. Non-compliance

often results in serious consequences, from loss of customer confidence to significant fines. IPLocks continuously enhances the IPLocks Solution, enabling customers to automate, consolidate and enforce ongoing monitoring and analysis of key internal controls.

IPLocks is the only patented, comprehensive data protection and compliance enforcement solution that assesses for vulnerabilities, monitors user behavior activity and provides an independent audit analysis to support and sustain compliance. The IPLocks solution is an automated, cost-efficient and business-focused database software solution that secures data at the source – the database. It provides organizations with competitive agility by managing risk, and reducing the time, effort and expense associated with database compliance enforcement and data protection.

About IPLocks

IPLocks, Inc. is the leading provider of database security and compliance solutions. The company works with enterprises, service providers, and solution providers worldwide to protect critical information assets from negligent and malicious user threats, to manage database security policy vulnerabilities, to ease the pain of compliance and to protect privacy. San Jose, California-based IPLocks is a privately held global corporation with customers throughout North America, Asia Pacific, South America and Europe.
